Economy & Transport

Transport is an essential part of the global economy

Chain of: production – transport - consumption

- Economic growth needs innovation and cost reduction
- Competition and innovation are stimulated
- Negative effects must be addressed

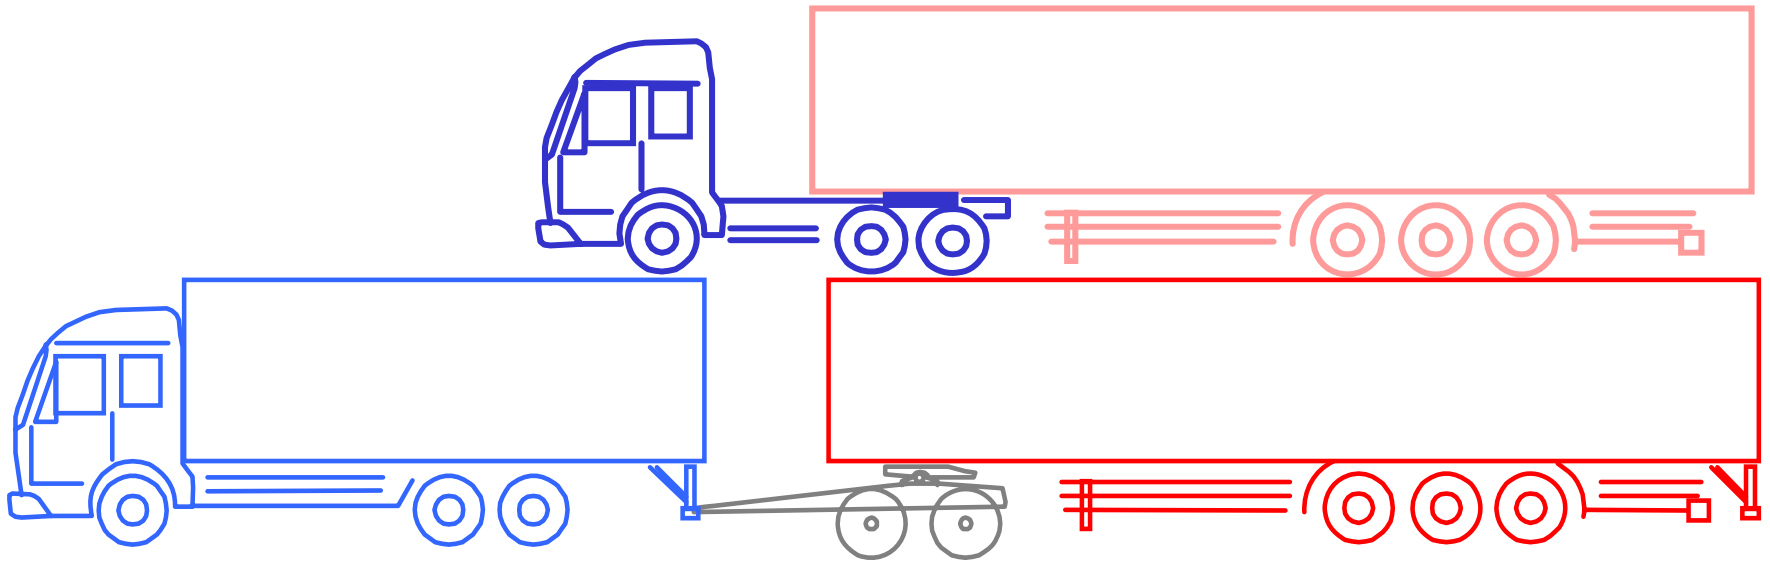

Transport Evolution

- More efficiency, larger units
- Technology reduces risks:
 - ABS
 - EBS
 - navigation systems
 - Anti tilt systems
 - Etc...
- Regulation for unwanted effects:
 - Maximum dimensions
 - Traffic regulations
 - Driver licenses
 - Emission reduction
 - Etc...

EMS in The Netherlands

Up to 33% less fuel & CO₂ per ton/km

Up to 25% lower costs per ton/km

Technology and regulation to prevent negative effects

No public money needed for the infrastructure!

EMS in Europe

- Research: positive outcome European cost & benefit research
- Pilots: individual countries & between consenting countries
- Evaluation of the results
- Go or no go for EMS up to 25,25 metres and .. tonnes
